

Financial Accountability & Impact Summary

\$20,000

Total Funding

200

Systems Deployed

\$100

Cost per Deployment

Results & Impact

200 filtration systems deployed. Each system can produce up to 150 gallons of safer, cleaner water daily and potentially serve up to 300 people, depending on actual use and local conditions. This deployment supports the larger goal of 1,000 systems in Kakuma and a repeatable model for other communities.

System capacity is potential—not measured daily production or verified people served.

How the Funds Were Used

UA Legacy Grants raised \$20,000 to provide 200 clean water filtration systems to families and communities in Kakuma Refugee Camp, Kenya. Funding supported the complete deployment process—not simply the purchase of filters.

Filtration Systems — Approximately \$10,000 (50%)

Purchase of 200 filtration systems at an average cost of approximately \$50 each, including applicable international fees, taxes, and related costs.

Deployment, Training, Oversight & Operations Approximately \$10,000 (50%)

The remaining funding supported international shipping, local transportation and distribution; recipient training in proper use, maintenance and backwashing; compensation and operating support for the local Oversight Director and deployment team; and project coordination, documentation, administration and organizational sustainability.

Our Financial Commitment

UA Legacy Grants is committed to responsible stewardship, with a goal of keeping general organizational operating costs at 30% or less of total funding. Direct project costs—including shipping, distribution, local oversight and training—are distinguished from general organizational administration.

Allocations are approximate. The 30% figure is an organizational goal, not a statement of audited operating costs.

From the Field

Community participation, training and deployment are part of the complete process.

Water Filtration Systems

Buckets and filtration equipment at a community gathering.

Community Training

Participants gathered for a group session.

Systems for Families

A filtration bucket shared during the gathering.

Working Together

Participants alongside prepared filtration systems.

From Kakuma to the World

ACHIEVED

200 Systems Deployed in Kakuma

A practical, affordable and repeatable approach to clean water deployment.

IN PROGRESS

Raise \$80,000 by December 31, 2026

Provide the remaining 800 systems needed to reach the initial goal of 1,000 in Kakuma.

NEXT

Complete Kakuma; Expand to Uganda and Burundi

Work with trusted local partners on filtration systems, training and sustainable access to safe drinking water.

A Mission for Generations

Our long-term ambition is to reach one million people, then five million, ten million, and ultimately tens of millions of lives. These are aspirations—not results achieved to date. We envision a repeatable model that empowers local leaders and mobilizes sponsors, ambassadors, churches, businesses, foundations and humanitarian partners.

Our Mission

Through Pamoja Maji – Together for Clean Water, we are building a repeatable approach to delivering clean water solutions to communities in need. Our promise: Responsible stewardship. Local accountability. Lasting impact.

Leave a Legacy. Change a Life.

Pamoja Maji – Together for Water. Together for Life.
